How WoundRight Works!

- Home
- LTC, Pace, ALF
- Hospital

- Charts
- Reports

- Saves

WoundRight allows you to take your tablet anywhere and capture your clinical data and images. Data entry is done once, whether you have internet connectivity or not. Once you synchronize your data, you can analyze, report, and accurately track wound progress over time, in real time from any computer via standard web browser. You save money, time, and paper.

WoundRight's patented technology allows wound professionals to access the tablet data, enter patient data, and continue to assess wounds even during internet outages.

WoundRight will integrate into any EHR/EMR. Just call us when you are ready to integrate and we will work with your EHR/EMR provider.
